Art Unit: 1644

## **DETAILED ACTION**

1. Applicant's preliminary amendment, filed 02/02/2005, is acknowledged.

Claims 1 – 32 are pending.

## Restriction Requirement

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

- I. Claims 1 19, drawn to a method comprising administering an IgA receptor antagonist.
- II. Claims 1 8, 12, and 16 19, drawn to a method comprising administering an IgA receptor agonist.
- III. Claims 20 22, drawn to a method of delivering a substance to a mesenchymal cell comprising administering a conjugate of the substance to an IgA receptor ligand.
- IV. Claims 23 26, drawn to a method of detecting a condition, comprising assaying a sample for a nucleic acid encoding an IgA receptor.

Application/Control Number: 10/520,284

Art Unit: 1644

V. Claims 23 – 26, drawn to a method of detecting a condition, comprising assaying a sample for an IgA receptor.

Page 3

VI. Claims 27 – 32, drawn to a method of detecting IgA mediated bronchial hyperreactivity.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

3. The inventions listed as Groups I – VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions of Groups I - VI are deemed to have no special technical feature that defined the contribution over the prior art of Capra et al. (US Patent No. 6,063,905, see entire document).

Capra et al. teach an agent for binding to an IgA receptor, such as pIgA, thereby modulating said receptor (e.g. columns 3 – 4, bridging paragraph). Capra et al. further teach methods comprising administering said agent (e.g. columns 6 – 7, bridging paragraph). It is inherent in the methods of Capra et al. that administering an agent capable of binding IgA receptor will result in binding and modulating of the receptor on mesenchymal cells. Therefore, the teachings of Capra et al. anticipate at least the instant claim 1.

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art, they do not have a single general inventive concept and so lack unity of invention.

Art Unit: 1644

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ILIA OUSPENSKI whose telephone number is 571-272-2920. The examiner can normally be reached on Monday-Friday 9 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on 571-272-0841. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
